ADY62269

hIL-7 cDNA was isolated by cross-hybridisation studies using a probe derived from the mIL-7 cDNA (AAN90781) to screen human genomic DNA and cDNA libraries derived from cultures of the human liver adenocarcinoma cell line SK-HEP-1 (ATCC HTB-52). A plasmid bearing the coding sequence

coding sequence

            Sequence was isolated by cross hybridisation with a probe derived from murine IL-7, see also AAQ06415. Gene product may be expressed in E.col: or yeast cells, and may be used in stimulating development and proliferation of the haemopoietic precursors of T and B cells, and granulocyte/macrophage precursors in bone marrow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of hII-7 in E. coli strain JM107 was deposited under ATCC 67546. A purified II-7 protein compsn. pref. has a specific activity of more than 1x10(4) II-7 units/microgram. It can be used for modulating or augmenting immune, lymphopoietic and/or hematopoietic responses in mammals. Analogues of hII-7 include: more than one Cys residues have been replaced by non-Cys residues; or residues 121-139 of mature hII-7 have been deleted. (Updated on 25-MAR-2003 to correct PA field.)                                         The invention provides mammalian interleukin-7 (IL-7), prepd. by purification from cell culture supernatants or by expression of DNJ sequences encoding a mammalian IL-7. The murine and human IL-7 DNA sequences are given in AAQ69157-58. The IL-7 is useful, in a pharmaceutical compsn., in admixt. with a diluent or carrier, for inducing proliferation of bone marrow-derived pre-B cells. It is us for regulating proliferation and differentiation of lymphocyte and haematopoietic progenitors. (Updated on 25-MAR-2003 to correct PF 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 177

                                                                                                                                                                                                                                                                                                                                    Muteins of human interleukin-7 (IL-7) (AAR92796) and other cytokines (see also AAR92790-95 and AAR92797-802) are obtd. by site-directed mutagenesis of natural cytokine sequences at positions identified as critical for activity. In IL-7, an amino acid substitution is made between helix B and helix C, and/or in helix D, giving muteins with partial agonist activity. The muteins are useful in the screening of cytokine and cytokine receptor levels, and in the diagnosis or treatment of e.g. inflammation, cancer, and degenerative disorders
                                                                                                                                                                                                                                                                                 Sequence 177 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mutein(s) of human and murine cytokine(s), esp. interlep600 contg. amino acid substitutions. - useful for the treatment of cancer, inflammation, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Zurawski SM,

                                               The present sequence represents human interleukin-7 (IL-7, also known as lymphopoietin-1 (IP-1) and pre-B cell growth factor). In addition to stimulating the development and proliferation of the hematopoietic precursors of T and B cells, IL-7 is also capable of inducing the proliferation of megakaryocyte and granulocyte/macrophage precursors in bone marrow. The mature protein is used to produce immunoreactive antibodies, particularly monoclonal antibodies. These antibodies are made by usual immunisation of mice with purified IL-7, then fusing their spleen cells with NSI murine myeloma cells to produce antibody-secreting hybridomas. The antibodies are used to detect IL-7 and to neutralise it in assays or experiments involving many different lymphokines

The invention relates to a new method for inducing the proliferation of megakaryocyte precursors or granulocyte/macrophage precursors in a mammal by administering to the mammal an effective amount of mammalian interleuking (IL-7) in an admixture with a suitable diluent or carrier
                                                                                                                                                                                                                                                                                                                                                 Sequence

The method is useful for treating idiopathic pulmonary fibrosis in a mammalian subject. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating idiopathic pulmonary fibrosis in mammalian subject comprises administering interleukin-7 polypeptide which inhibits transforming growth factor beta production or signaling in a pulmonary fibrosis

The polypeptide is useful for making an antigenic polypeptide. The antigenic polypeptide is useful for binding an antigen in a biological sample, where it forms a binding compound-antigen complex. The polypeptide is also useful in forensic sciences to distinguish rodent from human, or as a marker for distinguishing between different cells exhibiting differential expression or modification patterns. The sequences are useful for treating abnormal medical
                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                     neurophysiological polypeptide, which invention.
                                                                                                                                                                                                                                                                                                conditions such as immune disorders e.g. T cell immunodeficiencies, chronic inflammation or tissue rejection, or cardiovascular or neurophysiological conditions. This sequence represents the human IL-7 polypeptide, which is homologous to the human IL-B50 polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated or recombinant polynucleotide encoding antigenic human interleukin-B50 sequence which is useful for treating T cell immunodeficiencies, chronic inflammation or tissue rejection, or

                                                                                                                                                                                                                                                                                    The invention describes protecting an animal from a disease or condition that can be treated by wild-type granulocyte macrophage colony stimulating factor (GM-CSF) comprising administering to an animal having the disease or condition a composition comprising GM-CSF cysteine mutein. The methods are useful for preventing or treating the occurrence of neutropenia in an animal, the neutropenia is selected from neutropenia resulting from myelosuppressive chemotherapy, neutropenia associated with bone marrow transplantation, neutropenia associated with infection with the human immunodeficiency virus, neutropenia associated with burns, surgery, dilatation, anaemia and neonatal septicaemia, severe chronic neutropenia, neutropenia associated with aplastic anaemia and acute leukaemia. This is the amino acid sequence of human interleukin 7 (IL-7), a member of the growth hormone super family which also includes GM-CSF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-JUL-1997;

C. This invention relates to a method of differentially modulating the CC growth or differentiation of blood endothelial cells (BEC) or lymphatic composition comprises contacting endothelial cells with a CC composition comprising an agent that differentially modulates blood or CC lymphatic endothelial cells. Treating hereditary lymphoedema comprises CC identifying a human subject with lymphoedema and with a mutation in at CC least one allele of a gene encoding a LEC protein, where the mutation CC correlates with lymphoedema in human subjects, and with the proviso that the LEC protein is not VEGFR-3; and administering to the subject a CC composition comprising a lymphatic growth agent selected from VEGFC-C or VEGF-D polypeptides and polynucleotides. The invention may be useful for CC vasotropic or antiinflammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood CC is useful in modulating the growth or differentiation of blood CC predisposition to the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells for an endothelial cells, in treating hereditary CC predisposition to the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells for an endothelial cell disorder or the treatment for the disferential modulation of blood vessel endothelial cell growth or differentiation. The LEC gene or of other diseases involving the lymphatic vessels, such as various inflammatory diseases involving the method of the invention.Note: This sequence does not appear in the specification but was obtained by the indexer using the source data given in table 14 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present invention describes a purified or isolated interleukin 7 (IL-7) conformer comprising three disulfide bridges: (i) Cys: 1-4 (Cys2-Cys2); (ii) 2-5 (Cys34-Cys129); and (iii) 3-6 (Cys47-Cys141). Also described: (1) an IL-7 drug substance comprising, as the desired product, the IL-7 conformer, where the drug substance is substantially free of IL-7 molecular variants or product related impurities, and where the total amount of weight of IL-7 in the drug substance is at least 98, preferably 99.5 % by weight; (2) a pharmaceutical composition comprising the drug substance and one or more carriers; (3) a nucleic acid molecule encoding substance and one or more carriers; (3) a nucleic acid molecule encoding
                                                                                                              conformer and pharmaceutical composition are useful for prophylactic or therapeutic stimulation of B or T lymphocyte development and proliferation, or for enhancement of global or specific immuno-response. They are also useful for preventing or reducing opportunistic infections in immunodeficient patients; for prolonging lymphopoiesis stimulation and/or producing specific immune response and/or to broaden the repertoire of a specific immune response in human patients, e.g. immunodeficient patients, cancer patients, patients undergoing grafts, patients infected with a virus or a parasite, elderly patients or any patients having low CD4 count. The present sequence represents and the represents or any patients having low CD4 count. The present sequence represents and the represents or any patients in the represents or any patients or any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the II-7 polypeptide, where the molecule comprises an altered Shine-balgarno-like sequence; (4) a vector comprising the nucleic acid; (5) a recombinant host cell comprising the nucleic acid or the vector; (6) an antibody specifically immunoreactive with the II-7 conformer; (7) a method of producing an II-7 drug substance or pharmaceutical composition; and (8) a method of controlling an II-7 containing preparation by determining the presence and/or relative quantity, in the preparation, of an II-7 conformer. II-7 conformer has immunostimulant activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New purified or isolated IL-7 conformer comprising three disulfide
bridges, useful for preventing or reducing opportunistic infections
immunodeficient patients, cancer patients, patients undergoing graff
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO2004018681-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
The present invention describes a purified or isolated interleukin 7 (IL-CC 7) conformer comprising three disulfide bridges: (i) Cys: 1-4 (Cys2-CC Cys92); (ii) 2-5 (Cys34-Cys12); and (iii) 3-6 (Cys47-Cys141). Also CC described: (1) an IL-7 drug substance comprising, as the desired product, CC the IL-7 conformer, where the drug substance is substantially free of IL-CC amount of weight of IL-7 in the drug substance is at least 98, preferably CC 99.5 % by weight; (2) a pharmaceutical composition comprising the drug substance and one or more carriers; (3) a nucleic acid molecule encoding CC substance and one or more carriers; (3) a nucleic acid molecule encoding CC the IL-7 polypeptide, where the molecule comprises an altered Shine-CC palgarno-like sequence; (4) a vector comprising the nucleic acid; (5) a cc recombinant host cell comprising the nucleic acid or the vector; (6) an antibody specifically immunoreactive with the IL-7 conformer; (7) a method of producing an IL-7 drug substance or pharmaceutical composition; and (8) a method of controlling an IL-7 containing preparation by CC determining the presence and/or relative quantity, in the preparation, of CC notioner; and pharmaceutical composition are useful for prophylactic or therapeutic stimulation of B or T lymphocyte development and CC proliferation, or for enhancement of global or specific immuno-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               interleukin 7 conformer; IL-7 conformer; disulfide bridge; immunostimulant; B lymphocyte development; T lymphocyte development; B lymphocyte proliferation; T lymphocyte proliferation; T lymphocyte proliferation; T lymphocyte proliferation; immuno respoinfection; immunodeficient; lymphopoiesis; cancer; human.
                                                                                                                                                                                                                                                                                                                                                                                                          Example A;

                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polynucleotide encoding cytokine interleukin-850 (II-850). The polynucleotide and polypeptide of the invention are useful for regulating activation, development, differentiation and function of various cell types, including haematopoietic cells, for treating abnormal medical conditions e.g., immune disorders such as T cell immune deficiencies, chronic inflammation, tissue rejection, cardiovascular or neurophysiological conditions. The polypeptide is useful as antigen e.g., immunogen, for raising antibodies to various epitopes on the protein, both linear and conformational epitopes. The present sequence is human IL

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: Hematopoietic growth factor capable of stimulating the proliferation of lymphoid progenitors. It is important for proliferation during certain stages of B-cell maturation.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-7/IL-9 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This Swiss-Prot entry is copyright. FUNCTION: Hematopoietic growth factor capable of stimulating proliferation of lymphoid progenitors. It is important for proliferation during certain stages of B-cell maturation. SUBCELLULAR LOCATION: Secreted.

SIMILARITY: Belongs to the IL-7/IL-9 family.

It is important for proliferation during certain stages of B-cell maturation. SUBCELLULAR LOCATION: Secreted.

PTM: Three disulfide bonds are present (Probable).
SIMILARITY: Belongs to the IL-7/IL-9 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GO:0005125; F:cytokine activity; IDA.
